Press Release

ANTlabs & PATCHLINK CORPORATION TO PROVIDE JOINT END-POINT QUARANTINE SOLUTIONS TO APAC CUSTOMERS

- Agreement Combines Leading Security Applications to Give Customers Highly Developed Network Access Control

SINGAPORE – August 11, 2005 –Advanced Network Technology Laboratories (ANTlabs)

(www.antlabs.com) and, PatchLink™ Corporation (www.patchlink.com), the leading provider of security patch, vulnerability, and compliancy management solutions, today announced a fully integrated solution that will ensure customers a more secure network access environment. Through the agreement with ANTlabs, PATCHLINK UPDATE™ and the associated PatchLink Quarantine technology will be bundled with ANTlabs' solutions for customers in Asia Pacific.

Aw Peng Soon, vice president of business development at ANTlabs, said, "This strategic partnership with PatchLink delivers a complete enterprise end-point security solution to the corporate domain cost effectively. In addition, our customers in the Telco space now have an additional value added service offering for broad-base public network access areas such as airports, cafés, hotels and exhibition venues."

PatchLink's strategic security software solutions are designed for rapid enterprise-wide assessment and deployment of critical security patch and system configurations for a broad range of supported vendor software and hardware types, together with end-point quarantine management.

According to Chris Andrew, vice president of product development at PatchLink, "ANTlabs offers a comprehensive set of hardware products that have been integrated with PatchLink Quarantine to offer high-quality network access control solutions to our customers in a wide variety of network architectures, including wireless. Now corporate enterprises and service providers alike will have peace of mind against the endless barrage of security threats by stopping a potential carrier at the front door and offering immediate immunization thus protecting all other users."

ANTlabs' Dynamic Network Quarantine (DNQ) solution help ensures that all network users are compliant with corporate security policies before they are granted full access to the network. On connecting to the DNQ protected network, a network user is placed under quarantine while being checked for compliance with corporate security policies such as the latest system and security patches and virus definition updates. Non-compliant users remain in quarantine and are redirected to obtain the necessary updates, thus protecting all other users on the network. The DNQ is built on ANTlabs' patented TruConnect technology, giving users the ability to retain all of their network infrastructure investment without an overhaul.

Demand for PatchLink's award-winning strategic security solutions has increased as its customers and partners throughout the region continue to recognize the importance of security patch, vulnerability, and compliancy management as core to their companies' infrastructures and policies.

The bundled solution will be available beginning in August 2005 with pricing available from ANTLabs authorized partners in Asia-Pacific.

About ANTLabs

ANTlabs (www.antlabs.com) is focused on the research and commercialization of wireless and broadband networks enabling technologies, visitor-based networking, and network security solutions. ANTLabs is Asia-Pacific's technology leader of zero-configuration wireless and broadband public access provisioning, AAA (Authentication, Authorisation, Accounting) service gateways, and Internet roaming solutions. The company's flagship product is the ezXcess™ gateway, which powers more than 95 percent of hot spots in Singapore and Malaysia, and rapidly adopted by Asian carriers and wireless ISPs.

ABOUT PATCHLINK™ CORPORATION

PatchLink™ Corporation (www.patchlink.com) is the established leader for advanced, multi-platform, multi-vendor security patch, vulnerability and compliancy management software, solutions and services. Having the largest installed subscriber base for patch and vulnerability management software in the industry, the Inc. 500 company (2004) is headquartered in Arizona. PatchLink provides global support to its customers through a well-developed network of resellers and distributors, as well as through its offices in the United States (Scottsdale and Washington, D.C.), Australia, Hong Kong, Singapore and the United Kingdom. Incorporating a highly scalable, multi-platform approach to security for enterprise networks, including edge devices and end-point security, PATCHLINK UPDATE™ software provides customers with access to the world's largest repository of tested and secured patches and mis-configuration updates for deployment across their enterprises, integrating with leading vulnerability, network access control, and wireless management solutions to provide real-time remediation. PatchLink customers show a 95 percent-plus renewal rate and better than 97 percent indicate they are "satisfied or highly satisfied" with overall product and service performance. Customers in the Asia-Pacific region utilizing PatchLink software, solutions and services include: Prudential Assurance, Institute of Molecular & Cell Biology, Toyota, and Hong Kong Housing Society, among others.
